

Base R Cheat Sheet

Getting Help

Accessing the help files

?mean

Get help of a particular function.

help.search('weighted mean')

Search the help files for a word or phrase.

help(package = 'dplyr')

Find help for a package.

More about an object

str(iris)

Get a summary of an object's structure.

class(iris)

Find the class an object belongs to.

Using Packages

install.packages('dplyr')

Download and install a package from CRAN.

library(dplyr)

Load the package into the session, making all its functions available to use.

dplyr::select

Use a particular function from a package.

data(iris)

Load a built-in dataset into the environment.

Working Directory

getwd()

Find the current working directory (where inputs are found and outputs are sent).

setwd('C://file/path')

Change the current working directory.

Use projects in RStudio to set the working directory to the folder you are working in.

Vectors			Programming					
Creating Vectors			For Loop			While Loop		
c(2, 4, 6)	2 4 6	Join elements into a vector	for (variable in sequence){	Do something	}	while (condition){	Do something	}
2:6	2 3 4 5 6	An integer sequence						
seq(2, 3, by=0.5)	2.0 2.5 3.0	A complex sequence						
rep(1:2, times=3)	1 2 1 2 1 2	Repeat a vector	for (i in 1:4){	j <- i + 10	print(j)	while (i < 5){	print(i)	i <- i + 1
rep(1:2, each=3)	1 1 1 2 2 2	Repeat elements of a vector						
Vector Functions								
sort(x)	rev(x)		If Statements			Functions		
Return x sorted.	Return x reversed.		if (condition){	Do something		function_name <- function(var){	Do something	
table(x)	unique(x)	See counts of values.	} else {	Do something different	}	return(new_variable)		
Selecting Vector Elements								
By Position			Example			Example		
x[4]	The fourth element.		if (i > 3){	print('Yes')		square <- function(x){		
x[-4]	All but the fourth.		} else {	print('No')	}	squared <- x*x		
x[2:4]	Elements two to four.					return(squared)		
x[!(2:4)]	All elements except two to four.							
x[c(1, 5)]	Elements one and five.							
Reading and Writing Data								
Input			Output			Description		
df <- read.table('file.txt')			write.table(df, 'file.txt')			Read and write a delimited text file.		
df <- read.csv('file.csv')			write.csv(df, 'file.csv')			Read and write a comma separated value file. This is a special case of read.table/write.table.		
load('file.RData')			save(df, file = 'file.Rdata')			Read and write an R data file, a file type special for R.		
Conditions			Conditions					
a == b	Are equal		a > b	Greater than	a >= b	Greater than or equal to	is.na(a)	Is missing
a != b	Not equal		a < b	Less than	a <= b	Less than or equal to	is.null(a)	Is null

Types

Converting between common data types in R. Can always go from a higher value in the table to a lower value.

<code>as.logical</code>	TRUE, FALSE, TRUE	Boolean values (TRUE or FALSE).
<code>as.numeric</code>	1, 0, 1	Integers or floating point numbers.
<code>as.character</code>	'1', '0', '1'	Character strings. Generally preferred to factors.
<code>as.factor</code>	'1', '0', '1', levels: '1', '0'	Character strings with preset levels. Needed for some statistical models.

Maths Functions

<code>log(x)</code>	Natural log.	<code>sum(x)</code>	Sum.
<code>exp(x)</code>	Exponential.	<code>mean(x)</code>	Mean.
<code>max(x)</code>	Largest element.	<code>median(x)</code>	Median.
<code>min(x)</code>	Smallest element.	<code>quantile(x)</code>	Percentage quantiles.
<code>round(x, n)</code>	Round to n decimal places.	<code>rank(x)</code>	Rank of elements.
<code>signif(x, n)</code>	Round to n significant figures.	<code>var(x)</code>	The variance.
<code>cor(x, y)</code>	Correlation.	<code>sd(x)</code>	The standard deviation.

Variable Assignment

```
> a <- 'apple'
> a
[1] 'apple'
```

The Environment

<code>ls()</code>	List all variables in the environment.
<code>rm(x)</code>	Remove x from the environment.
<code>rm(list = ls())</code>	Remove all variables from the environment.

You can use the environment panel in RStudio to browse variables in your environment.

Matrices

`m <- matrix(x, nrow = 3, ncol = 3)`
Create a matrix from x.

<code>m[2,]</code>	- Select a row	<code>t(m)</code>
<code>m[, 1]</code>	- Select a column	<code>Transpose</code>
<code>m[2, 3]</code>	- Select an element	<code>m %*% n</code>

Matrix Multiplication
`solve(m, n)`
Find x in: $m \cdot x = n$

Lists

`l <- list(x = 1:5, y = c('a', 'b'))`
A list is a collection of elements which can be of different types.

<code>l[[2]]</code>	<code>l[1]</code>	<code>l\$x</code>	<code>l['y']</code>
Second element of l.	New list with only the first element.	Element named x.	New list with only element named y.

Also see the `dplyr` package.

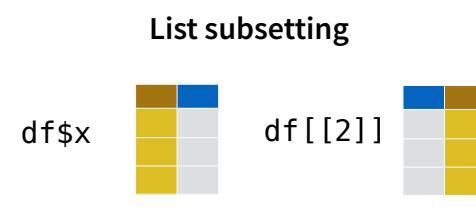

Data Frames

`df <- data.frame(x = 1:3, y = c('a', 'b', 'c'))`
A special case of a list where all elements are the same length.

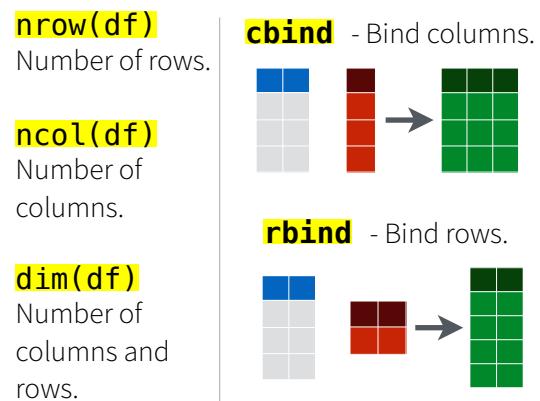

x	y
1	a
2	b
3	c

Matrix subsetting

<code>df[, 2]</code>	
<code>df[2,]</code>	
<code>df[2, 2]</code>	

Understanding a data frame
`View(df)` See the full data frame.
`head(df)` See the first 6 rows.

Strings

<code>paste(x, y, sep = ' ')</code>	Join multiple vectors together.
<code>paste(x, collapse = ' ')</code>	Join elements of a vector together.
<code>grep(pattern, x)</code>	Find regular expression matches in x.
<code>gsub(pattern, replace, x)</code>	Replace matches in x with a string.
<code>toupper(x)</code>	Convert to uppercase.
<code>tolower(x)</code>	Convert to lowercase.
<code>nchar(x)</code>	Number of characters in a string.

Also see the `stringr` package.

Factors

<code>factor(x)</code>	Turn a vector into a factor. Can set the levels of the factor and the order.
<code>cut(x, breaks = 4)</code>	Turn a numeric vector into a factor by 'cutting' into sections.

Statistics

<code>lm(y ~ x, data=df)</code>	Linear model.	<code>t.test(x, y)</code>	Test for a difference between proportions.
<code>glm(y ~ x, data=df)</code>	Generalised linear model.	<code>pairwise.t.test</code>	Perform a t-test for paired data.
<code>summary</code>	Get more detailed information out a model.	<code>aov</code>	Analysis of variance.

Distributions

Random Variates	Density Function	Cumulative Distribution	Quantile
<code>rnorm</code>	<code>dnorm</code>	<code>pnorm</code>	<code>qnorm</code>
<code>rpois</code>	<code>dpois</code>	<code>ppois</code>	<code>qpois</code>
<code>rbinom</code>	<code>dbinom</code>	<code>pbinom</code>	<code>qbinom</code>
<code>runif</code>	<code>dunif</code>	<code>punif</code>	<code>qunif</code>

Plotting

<code>plot(x)</code>	Values of x in order.	<code>plot(x, y)</code>	Values of x against y.	<code>hist(x)</code>	Histogram of x.
----------------------	-----------------------	-------------------------	------------------------	----------------------	-----------------

Also see the `ggplot2` package.

Dates

See the `lubridate` package.
